

Limeledge Living Collections: Fall 2022

Live Plants

Although Limeledge has installed over 40 plants in 2022, these initial plantings are just the tip of the iceberg compared to the plants that have been acquired. Typically, most of our plantings will be installed in the Spring, which will give our specimens maximum time to establish themselves and adjust to their new surroundings. For plants that may be marginal in the CNY climate, especially as young plants, this extra establishment time versus planting in the fall can be the difference between life and death. This year, by the time the Cook Lot was cleared, periods of dry weather made late Spring planting too risky.

Some of the Limeledge holdings will be permanent indoor conservatory plants, while others that are known to be marginal will be grown inside for several years to propagate and back them up, or for them to gain strength and give them the best odds of survival as a larger plant. In some cases, plants are “thrown to the wolves” (or in this case, a possible polar vortex) at a young age and/or small size to test their ability to survive. An example of this in Fall 2022 is *Cornus wilsoniana* (ghost dogwood) which is backed up in our holdings by another specimen of the cultivar ‘White Jade’. If it survives this winter, that will be a good indication that planting the ‘White Jade’ specimen in Spring should be a pretty safe prospect, furnishing Limeledge with the opportunity to compare ‘White Jade’ with a wild-type, typical seedling.
