

Limeledge Living Collections: Fall 2022 In The Pipeline (Seed List)

Our extensive seed holdings allow us to start many new species each year to fulfill the priorities of our living collection. Many of these seeds were wild-collected and are of known provenance for conservation via ex situ cultivation. Marginally cold-hardy species can be started during the winter and given a head start so they can be ready for Spring planting. The redundancy allowed by germinating a set of seedlings allows Limeledge to more thoroughly test the environmental tolerances of plants that have never been trialed in the climate of Central New York.
